

## Rapid Burial/Disposal Of Bodies

- Provision of low-cost caskets
- Encouragement of cremation
- Immediate use of body bags after victims pass away

Corpses have a high chance of passing on the disease, these precautions prevent that

Avoidance  
of  
changing  
public day  
to day  
lifestyles

No travel  
restrictions  
or screening  
of travelers

No closing  
of public  
events

Keep public  
spaces open

The amount  
of public  
backlash  
heavily  
outweighs  
the potential  
benefits

Not very  
effective  
methods in  
preventing  
H1N1

Keep the  
Public Highly  
Informed

- Assemble a PR task force
- Ensure all reported cases are medically confirmed
- Schedule routine press conferences

The more educated the public on how to prevent and control the disease the less likely the disease will continue to spread
